

Mothers use PreventionPays™ Computer Tablets to Screen for Postpartum Depression

**Brief data analysis of a six-month
Pilot study in Northern New Jersey using the PreventionPays System**

Executive Summary:

- **All participating sites report “very” easy system integration and were using most system features within the first day.**
- **All participating sites are continuing with system use after pilot study.**
- **All sites report high confidence in system reliability, risk rating and treatment guidance.**
- **System satisfaction with patients is “remarkably” high with an average score 9 on a scale of 10 (N-220)**
- **Having the system present in health locations has positively changed the level of dialog regarding mental health issues.**
- **Patient risk profiles are easily printed by system printer and incorporated into patient file for instant use with provider during that same visit.**
- **All providers have successfully used the system to improve service delivery, documentation, orders, and plans.**

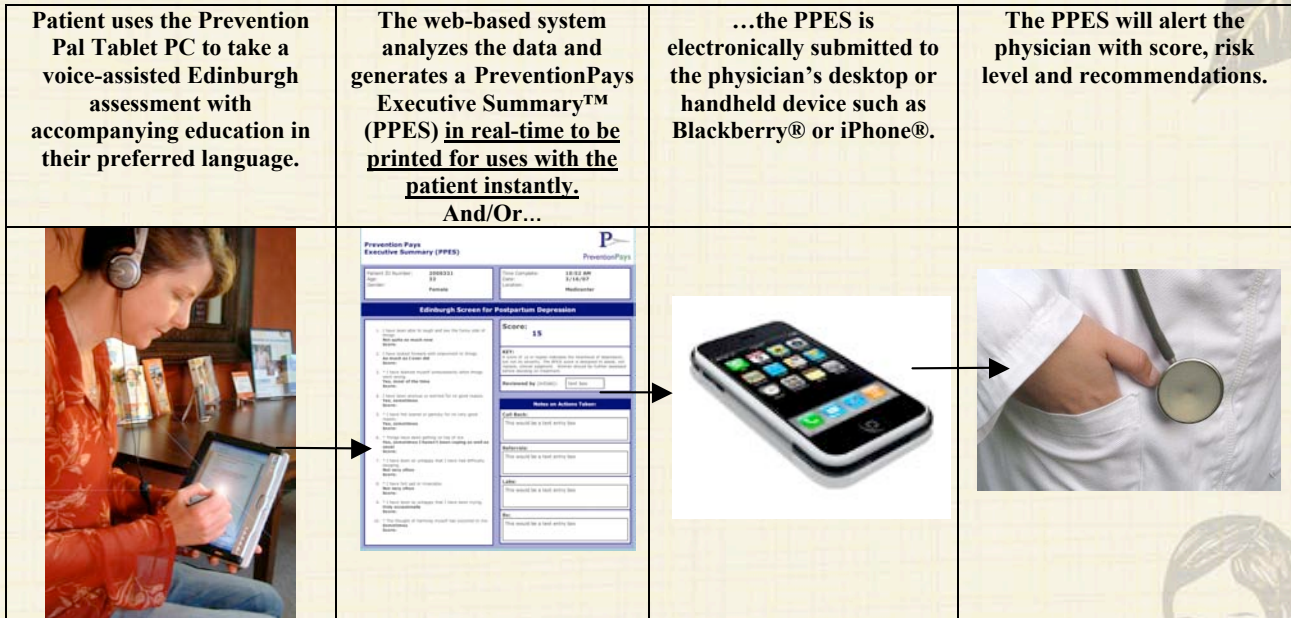

Four test sites: Valley Hospital, Dr. Michael Straker, OB/GYN, Dr. Jeffery Bienstock, Pediatrician, and Federally Qualified Health Clinic of East Orange

Patients use touch-screen tablet computers with headphones and receive education from Speak Up When You're Down materials provided by NJ Department of Health and Senior Services, followed by the Edinburgh Risk Assessment Scale in their choice of three languages.

Pilot Study was conducted in collaboration with the Northern New Jersey Maternal/Child Health Consortium

***Compliance with postpartum patient screens
in the waiting room***

PreventionPays workstation, as pictured here, includes the following main elements:

- PreventionPal (Intel® Tablet Computer)
- Flexible dock station
- Tablet-sized keyboard
- Color printer

(Two models shown here)
